## Our Team Member Teresa Adame Celebrating 25 Years with the A&R Team

Teresa Adame celebrated 25 years with the A&R Tarpaulins team this year.

Teresa Adame began her career with A&R Tarpaulins, Inc. on April 1<sup>st</sup>, 1991 as the Company's front office receptionist.

From her original position with A&R, Teresa rapidly grew into greater responsibilities by assuming duties as our order entry person and filling in on customer service, primarily assisting our late Partner and co-founder Aundra Arrington.

As the years passed and the company grew, Teresa assumed more and more responsibility, rising to the position of Project Manager for A&R's commercial transportation and industrial products. Teresa became the "go to" person for our truck cover systems as well as other indust-

rial. Products, not just for our company, but also for our region. In addition to those products Teresa started to take on a number of our ground support projects serving the local aerospace industry.

More recently her projects have come to include the MMA octagon canvas mats we provide to that industry.

Teresa now joins six other staff members at A&R who have surpassed 25 years of tenure with us in our 40 years of existence.

Throughout those years Teresa has been one of the primary reasons behind our company's growth, our ability to serve our clients, and the culture that has made all of this possible

We salute Teresa Adame and express our deepest appreciation for all she has done for and with A&R Tarpaulins over these past 25 years!

### Project Spotlight: Vehicle Inspection Canopies

AR Industries is proud to showcase one of this year's architectural government projects. By collaborating with our colleague, Made in the Shade Awnings, A&R successfully produced four large free standing vehicle inspection canopies.

Each canopy was 22' wide x 40' long. Two canopies were 10' in height and the other two reached 16' heights. Heat sealed Serge Ferrari 502 vinyl was

utilized for the covers which were laced-banded along the powder coated framework.

What makes these canopies so unique is that they had to be produced in such a way that the framework would fit in a 8' x 8' x 40' sea container before being installed.
